

Application

```
classDiagram
    class Application
    class com_example_App["com.example.App"] {
        +start()
        +main()
    }
    com_example_App --|> Application
```

The diagram illustrates a class hierarchy. At the top is the 'Application' class, represented by a white box with a black border and three horizontal compartments. The top compartment contains the name 'Application', while the other two are empty. Below it is the 'com.example.App' class, represented by a gray box with a black border and three horizontal compartments. The top compartment contains the name 'com.example.App', the middle compartment is empty, and the bottom compartment contains two public methods: '+ start()' and '+ main()'. A blue arrow with a hollow triangular head points from the top of the 'com.example.App' box to the bottom of the 'Application' box, indicating that 'com.example.App' inherits from 'Application'.

com.example.App

+ start()

+ main()
